LISTING OF CLAIMS

1. (currently amended) A method of manufacturing <u>a</u> fiber-reinforced <u>thermoplastic</u> thermoplastics, comprising:

a mixing step for mixing an uncured thermosetting resin with reinforcing fibers to obtain a mixture; and

a reaction step for forming a <u>thermoplastic</u> thermoplastics by causing a polymerization reaction of the thermosetting resin in the mixture so that the thermosetting resin polymerizes,

wherein said uncured thermosetting resin comprises a first reactive compound and a second reactive compound, and said polymerization reaction is a polyaddition reaction between said first reactive compound and said second reactive compound, and

wherein said first reactive compound is a bifunctional compound having two epoxy groups, and said second reactive compound is a bifunctional compound having two functional groups selected from among phenolic hydroxyl, amino, carboxyl, mercapto, isocyanate, and cyanate ester phenolic hydroxyl groups, and

wherein a polymerization catalyst selected from the group consisting of phosphorus catalyst, 1,2-alkylenebenzimidazole, 2-aryl-4,5-diphenylimidazole and combinations thereof is used in said polyaddition.

- 2. (original) The method according to claim 1, wherein said reinforcing fibers constitute a reinforcing fiber knitted web.
- 3. (previously presented) The method according to claim 1, wherein said reinforcing fibers are glass fibers.
- 4. (currently amended) The method according to claim 1, wherein, in the thermoplastics obtained in the reaction step, the softening point at which the storage modulus (Pa) is 1/10 of the storage modulus (Pa) at 306 300 K is between 310-450K, and at a temperature equal to or above the softening point, the storage modulus (Pa) is 1/100 of the storage modulus (Pa) at 300 K or less.

5. (previously presented) The method according to claim 1, wherein, in the thermoplastics obtained in the reaction step, the value of (E1-E2)/(T2-T1) when the storage moduli (Pa) at temperatures (K) T1 and T2 (T1<T2) below 450K are respectively E1 and E2, is $1\times10^5-1\times10^{10}$ (Pa/K).

Claims 6-16 (cancelled).

17. (previously presented) A fiber-reinforced thermoplastics, manufactured according to the method described in any of claim 1.
